The Butterfly Garden Project

Local schools working together to build native habitats for butterfly populations in the Cities of Cockburn and Fremantle.

INVITATION TO SCHOOLS TO JOIN THE PROJECT

Primary schools in the Cockburn and Fremantle districts are invited to join a local STEM Education Network that will work together to deliver the Butterfly Garden Project in 2019.

All participating schools will be required to establish a butterfly-host garden, however, it will be up to individual schools to decide to what extent this initiative will be integrated into their classroom teachings.

The City of Cockburn is covering the cost of the workshop, and Cockburn Cement is donating the butterfly-host plants and subsidising the cost of ‘live butterfly life-cycle kits’.

TEACHER PLANNING WORKSHOP

The workshop is presented by Dr. Elaine Lewis, who will share her own experience in coordinating a cross-curricular butterfly program. She will highlight key strategies for programming success and identify potential pitfalls to avoid.

Dr. Lewis will also guide participants through a customised planning process to adapt the Butterfly Garden Project to each individual school.

* It is encouraged that two or more representatives from each participating school attend the workshop to aid in collaborative planning.

* Light refreshments will be provided.
